

WRANGLE.ORG EXPLORATION WORKSHEET

Your name: _____.

Go to wrangle.org and spend some time exploring the website. Then, choose a biome and use it to complete the following questions.

What is the percentage of earth covered by your biome (if this info is not given in the description, you may have to draw from another source, such as the Global Rangelands link in the upper righthand corner)?

Recall that 47% of the world's surface is rangeland. What percentage of the world's rangeland is comprised of your biome?

You are talking to a 6th grader. They ask you "How can you tell if an area is a [your biome]?" How do you respond?

Choose a video under the biome description. Briefly summarize the overall idea/message of the video. List 3 things that you learned/surprised you. (Note: two of the biomes do not have video options. If your biome does not have videos, watch one from another biome and complete the question. Additionally, infer a couple traits/challenges/uses present in the video that may also be present in your biome).

Summary:

- 1.
- 2.
- 3.

Look at 3 different continents where this kind of biome occurs. Where, on each continent, does the biome occur? Is it surprising that these similar biomes occur on different continents? Why or why not?
